Radio Transmitter (manual)

All our UGVs come with a standard Transmitter/ Receiver for manual operation of the vehicle up to 660 ft away.

Control Systems

Autonomous Operations Module (AOM)

With our optional, on-board AOM installed, the vehicle communicates with a 'ground control' station.

The Ground Control station stays in contact with the AOM on the vehicle, recording its activities and sending instructions. The GC can communicate with the vehicle at distances up to 2,200 feet.

Ground Control Station

Ground control software can run on computers, laptops, tablets and phones.
